Apparently, that situation results in overwriting of the AA value and destroying the anti-aliasing operation. Thus, the current invention as defined by amended independent claims 3 and 12 that is storing the anti-aliasing value in a second buffer in association with the coverage parameters of the edge pixel stored in the first buffer, which anti-aliasing value is retained during rendering of other polygons containing the edge pixel as a function of the given polygon being in the foreground during the rendering operation of the other polygons, which the polygons are considered as triangle polygons.
